

Chongqing Jiangbei Airport, New International Terminal, Chongqing, China

Client
Chongqing Jiangbei International Airport

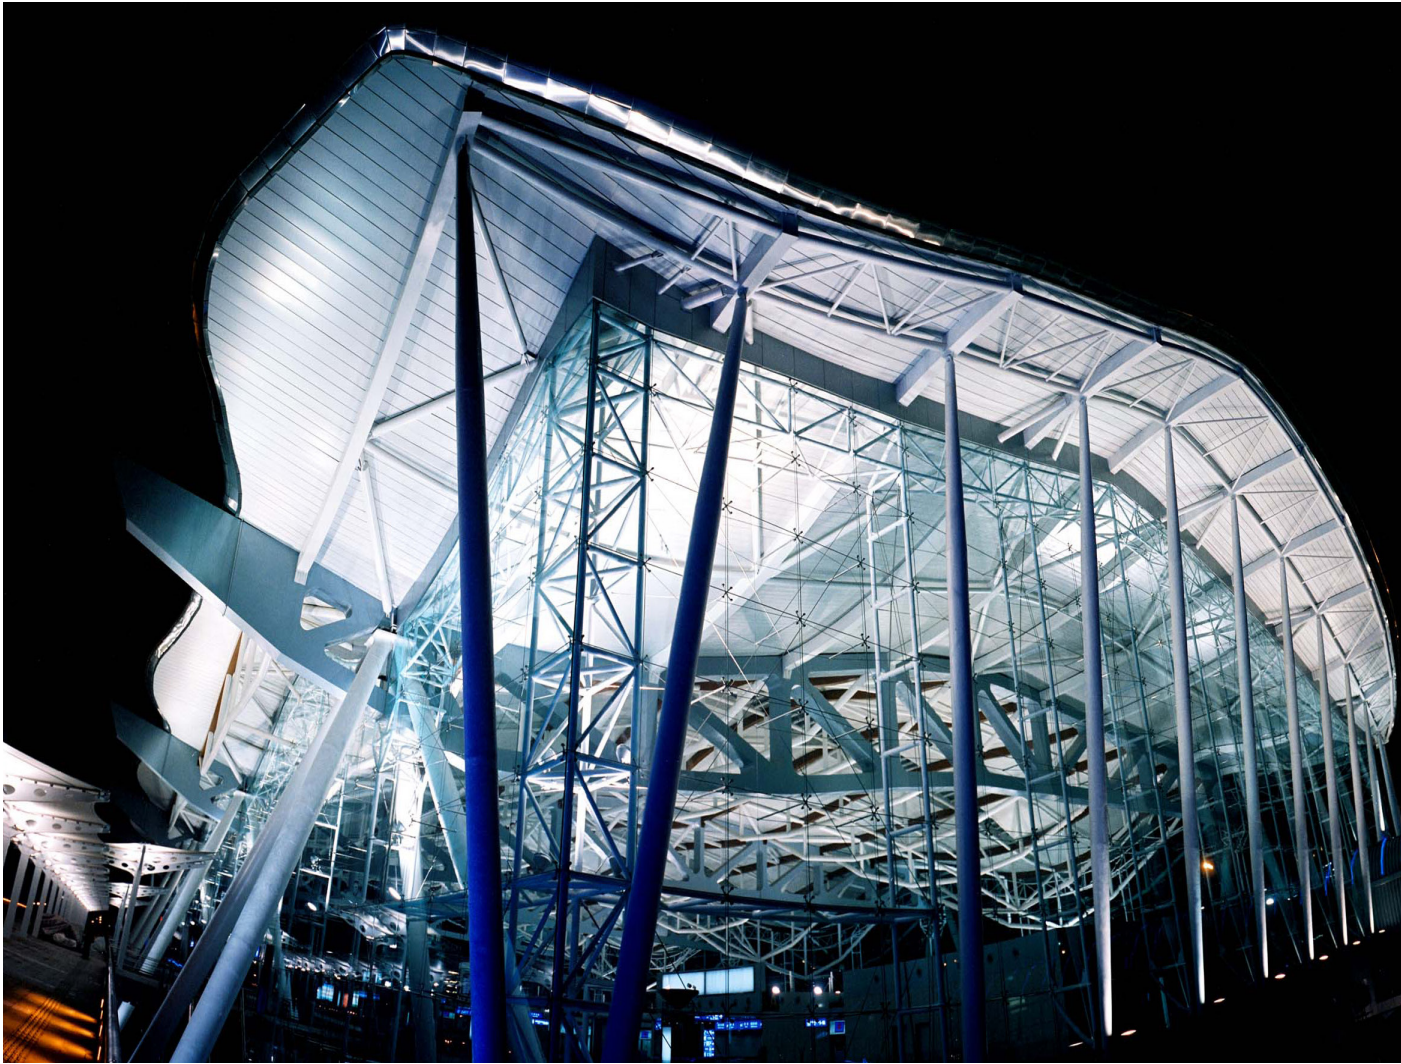

Value
£200m

Completion
2005

Project description
Llewelyn Davies was invited to participate in an international competition to design the first phase of the expansion programme for Chongqing Jiangbei Airport and was subsequently awarded the contract to develop the winning design proposal in 2001. The construction of the new 65,000m² terminal complex to process 8 million passengers a year was completed in December 2005. Our design proposal reflects the importance of Chongqing and reference to the ‘Mountain’ or ‘Hilly City’ is encaptured in the distinctive undulating roof profile which is supported by structural principles based on the symbolic reference to the ‘Dragon’. Fully glazed curtain walling and strategically located roof lights maximised daylight penetration and outward views across the airfield from the terminal, creating a concourse that is airy, spacious and calm.
